H1 PALLET WITHOUT SKIDS

FOR HIGH STORAGE RACKING OF HEAVY LOADS

closed deck pallet certified
for food industry

1200 x 800 x 155 mm

STRENGTH - 80% of damages, which cause withdrawing of a pallet from trade, concerns skids.

Skids play an important role in the construction of EUR pallet for high storage racking but they are also the easiest element to be damaged by pallet jacks. It can be concluded, from this statistics, that a pallet with a construction that requires no skids, would be several times more durable than an EUR pallet.

Our polyethylene pallet P19 is the first pallet without skids suitable for high-storage racking – it has a self-supporting, box-like closed deck, 5 cm thick, reinforced with 8 mm steel rods, which can support loads of up to 1200 kg on high-storage racks. Polyethylene, out of which the pallet is made, has a very high impact strength and durability, is chemically neutral, and is ten times more resistant to rain, sun and frost than wood.

FUNCTIONALITY – P19 pallet weighs 20 kg, which is less than a weight of a wooden pallet, and this is important when piling and transporting empty pallets; also the lack of skids makes operations with the pallet jack or a fork lift easier. P19 is certified for the use in the food industry and is easily cleaned thanks to the construction of a closed deck covering ribs. Rubber inserts on the upper surface of the pallet protect cargo from skidding and bevelled edges of the upper deck facilitate the work of a forklift and protect the pallet against damage. There are, however, automatic high storage warehouses and production lines equipped with microswitches activated by skids, which a pallet without skids brings to a halt. For such users we offer skids which can be snap fastened to the blocks, so pallet jacks can not damage them – they can only unsnap them.

ENVIRONMENT – To produce 8 wooden pallets, one tree must be cut. The plastic P19 pallet is produced from packaging waste, and is at least eight times more durable than a wooden pallet, which means that launching one P19 pallet in the market saves life of one tree and at the same time reduces the amount of plastic waste. P19 pallets are fully recyclable.
